1M Solenoid Rationalisation

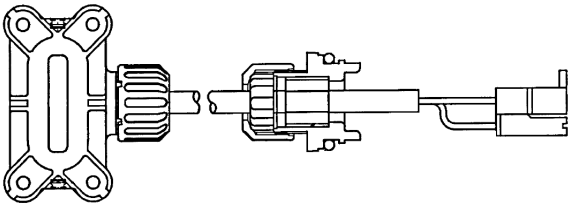

1 of 1

1M Solenoid Rationalization

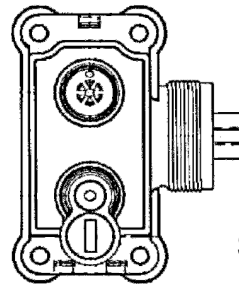

A global resourcing and rationalization exercise has begun on the 1M solenoid used on all Modal and Modular products. This involves replacing the current 'flying lead' and 'screw thread' versions with the new DIN style solenoid which has been developed for the U-ABS product. The switch over to the DIN style solenoid is targeted for the beginning of 2014, and will involve new DIN connector solenoid cables, adaptor cables for the Modular loom variants and new kit contents.

This change needs to be discussed with the customer to ensure no problems are encountered.

Current Modal & Modular versions

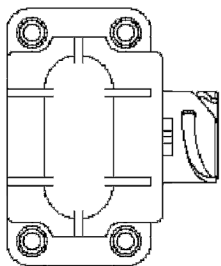

Flying lead version

Screw thread version

New DIN style

DIN connector

Affected part numbers

Based on sales volume, the following part numbers have been targeted to be changed:

364105021	364115021	364157021	364183001	364191001
364258001	364258011	364277011	364285001	364290001
364308001	364315001	364380001	364381001	364392001
Kits				
950364045	950364046	950364047	950364048	950364076
950364077	950364806	950364807
