Fleet+ V3

Technical Information

Part Numbers:

Fleet+ dongle	815023011
Cables (use DIAG+ cables):	
ECU/Dongle 6.5M	814001601
USB/Dongle	042707309

The Fleet+ V3 software is downloadable from FINDEX

Screen shots:

Enables operators to view trailer information in a graphical format on their PC

Connected to the ECU, the Fleet+ Program can extract ECU Data and provide a better understanding of what it is going on within the system. Every event is recorded and thanks to Fleet+ you will be able to integrate the whole system and view data charts. It utilises an Interface kit which includes the PC Interface dongle, together with its connecting cable.

Benefits

Use a standard personal computer to read EB+ Fleet log data.

Can display the ECU data from a connected ECU.

Can display the ECU data from a previously saved file.

Snapshot are recorded during certain events like overvoltage or overload.

Trip logs are recorded for each vehicle journey greater than 1Km (up to 1000 logs can be stored).

Histograms show the history of certain system parameters over the complete life of the vehicle.
