

Polymer Coated Spring Housing GoldSeal™ Products

During March 2018, Haldex will convert the remaining spring housings to a black polymer coating for all our GoldSeal T3030 Products. This change replaces the zinc plating with yellow dichromate finish. The new coating will enhance the corrosion resistance of our GoldSeal products and will standardize our product catalog. The new coating has been thoroughly tested and validated according to Haldex requirements. There will be no difference in fit, form or function as a result of this change.

Change will be handled as a running change. Haldex can provide the production start date for the change upon request.
