

This procedure is applicable to Haldex ModulT Air Disc Brake Pads.

Preventative maintenance is important for many vehicle systems including all types of foundation brakes and air disc brakes are no exception. Air disc brake pad wear is dependent on many factors including:

- Vehicle Applications
- Tire Conditions
- Suspension/Shocks
- Driver Habits
- Driving Environment

In addition to industry recommended practices for brake system maintenance, Haldex suggests a visual inspection of air brake disc pads with the wheels mounted every three months. At 12 months, a full inspection of the disc pads with wheels removed is recommended. The best time to perform this check is during the vehicle annual inspection.

Haldex has created a Single Axle Brake Pad Accessory Kit for Replacement Pads 95396. This kit includes the parts for one caliper only and is only for use on Haldex ModulT Air Disc Brakes.

Please contact your Haldex Territory Manager or Customer Service Representative for pricing and availability.

Part #790-97341
