Air-Push Fittings

MIDLAND™

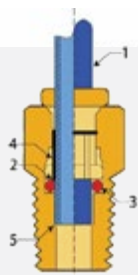

Easy installation. Reliable performance.

Quality in. Quality out. Midland Air-Push Air Line Fittings.

TO CONNECT TUBE: Cut tubing squarely. Insert tube into fitting until friction is felt as tube slides past the O-ring. Continue to push tube until it presses firmly against the internal tube stop. A slight twist while inserting tube is recommended.

TO DISCONNECT TUBE: With thumb and forefinger, hold top of insert against fitting body and pull tubing out with free hand. No other tools required.

Tubing (1) is inserted into the fitting, passing through gripping teeth (2). O-ring (3) provides leak proof seal against outer diameter of the tube. Gripping teeth grab tube, expanding the insert. Pulling back on the tube tightens grip as the insert moves onto the camming surface (4). Air pressure through tube further tightens grip. Positive tube stop (5) provides tube support to prevent leakage.
