

Haldex Pressure Protection Valve

Haldex introduced a new family of Pressure Protection Valves to the North American market in 2010. Haldex will no longer produce the old version (KN part numbers) and will obsolete the parts as of March 1, 2012 or as inventories are depleted. The below cross reference provides the functional replacement part for each obsolete part number, exception KN31170. Replacement parts should be matched to the application to insure the new part is the best choice for performance and that safety requirements are met.
