

## Haldex Full Function ABS (FFABS) Tank Mounting Nipple No Longer Supplied With Pre-Applied Sealant

Effective immediately, Haldex will begin shipping all Full Function ABS (FFABS) products that include a tank mounting nipple without a pre-applied sealant. This change is being made to allow for customer preferences in installation including, sealant manufacturer and timing of application. This will be treated as a running change and will result in no affect in fit, form or function of FFABS products.

### Reservoir Port Nipple 1/2" NPT and 3/4" NPT

Apply PTFE based thread sealant to fittings and reservoir nipple threads sparingly, so sealant does not enter through valve ports.

If you have questions, or require additional documentation, please contact your Haldex Representative who will be able to provide a complete list of part numbers affected by this change.
